Education

🎓 **Robert Gordon University** BSc Computer Science Honors Sept 2020 – May 2025

📶 **Enterprise Web Development** *React, NextJS, MUI, MongoDB*

- Engineered a full-stack *NextJS* web application inspired by *Twitter* in alignment with a set specification; choosing appropriate technologies to best fit the task and timeline.
- Designed, built and shipped the webapp, making use of the industry standard UI component framework *MaterialUI* to streamline development; integrated *Auth0* authentication for user account management; architected database schema and integrated a *Mongo Atlas* connection to store user generated content.

🤖 **Advanced Artificial Intelligence** *Python, Scikit-learn, TensorFlow*

- Developed a sentiment-analysis pipeline to identify linguistic indicators of potential mental-health risk in online forum posts, applying ethical considerations around classification and interpretation.
- Achieved with representation learning methods such as *Word2Vec* and *Universal Sentence Encoder*; evaluating multiple classifiers like *kNN* and *Neural Networks*.

Experience

👤 **Junior Software Engineer** Sword Group – Aberdeen, Scotland June 2025 – Present

- Full-stack .NET development, concurrently iterating on multiple complex systems for a variety of clients. Projects typically incorporating *WPF*, *Blazor* and *MAUI*; making use of *Telerik* UI frameworks and an *Azure* backend.
- Collaborated in a small team of eight, providing quality assurance for submitted pull requests and making sure our in-house documentation, ticket and project management systems were up to date and insightful.
- Delivered high quality software solutions to meet and exceed the expectations of our clients; interfacing directly to ensure customer satisfaction and transparency with the agile process.

👤 **Software Engineer Intern** Dematic – Aberdeen, Scotland June 2022 – May 2023

- Integrated with a small agile team to build solutions tailored to the specifications of our core client; navigating a mature *C* codebase to automate real-world warehouse operational machinery safely and efficiently.
- Presented team's work to clients, walking through the capabilities of our work, resolving technical queries and onboarding any suggestions, iterating alongside software and warehouse engineers alike to resolve issues within the system, making ample use of the *Jira* ticket management system to document the process.

Projects

✓ **Diem** *React, CRXJS* github.com/adsuth/diem

Developed and published a custom browser extension to extension marketplaces where users can track and manage daily games like *Wordle*, *Queens* and *Minute Cryptic*, all stored locally on the client's storage. Implemented full cross-browser support for *Chromium* and *Firefox* browsers, handling platform-specific API and manifest requirements to ensure consistency across environments.

🔗 **Better YT Shorts** *React, JavaScript, CRXJS* github.com/ynshung/better-yt-shorts

Worked on a now-retired open-source web extension that aimed to improve the user experience on *YouTube Shorts*; streamlining development by porting the front-end to *React* and working to resolve tickets from the 30,000 users of the extension.

Technologies

Languages: JavaScript, Python, Java, C#

Technologies: React, TS, .NET, Blazor, WPF, MAUI, Azure
